Attention: Mr. Don Mangialardi

Re; Milford Rivet & Machine Co.  
Penn Division - Bathoro  
Industrial Waste Treatment  
Job No. 2141

Gentlemen:

In accordance with Mr. John F. Daly Jr.'s letter of December 19, 1972, this letter is to report the status of the impoundments and sewage treatment plant at the above site.

The new sewage treatment system was put into operation as of December 15, 1972. At this time the pipe with which the sewage treatment water was directed to the lagoons was disconnected. Since that date no plating waste has gone into lagoons. The waste water which was in the lagoons has been processed through the new treatment plant and the level has been reduced to a minimum.

Yesterday, March 14, we met with Mr. Dick Walker, plant manager of the above plant and Mr. Dennis Zimmer of Rollins-Purle regarding the removal of sludge from the existing lagoons and disposal of waste sludge from the new sewage treatment system. At this time, Mr. Walker authorized Rollins-Purle to proceed with the removal of this sludge. We expect that this will be completed prior to March 30, 1973. As soon as all sludge has been removed, we will then proceed to remove the fence and gates surrounding the existing lagoons. We will then immediately grade the area of the lagoons to meet the existing grades and seed the entire area for grass. We will advise you as soon as the entire work has been completed.

Very truly yours,

WILLIAM F. LOTZ, INCORPORATED
